EDUCATION

PES University

Bachelor of Technology in Computer Science (CGPA: 8.43 / 10.0)

Bengaluru, India

Aug. 2023 – Present

- **Relevant Coursework:** Data Structures and Algorithms, Object-Oriented Programming, Web Technologies, Database Management Systems, Distributed Systems

TECHNICAL SKILLS

Languages: Java (Core, Concurrency), Python, C, SQL

Backend & APIs: RESTful API Design, FastAPI, Flask, TCP Sockets, Asynchronous Programming

Concurrency & Systems: Multi-Threading, Java Concurrency, Distributed Systems, Event-Driven Architecture, System Design, Design Patterns

Databases: MySQL, SQLite, Query Optimization, Relational Data Modeling

AI / ML: PyTorch, TensorFlow, LLM Integration, Conversational AI (Dialogflow), Computer Vision

Tools & Practices: Git, GitHub, VS Code, Unit Testing, Object-Oriented Programming (OOP), Data Structures & Algorithms

EXPERIENCE

Core Member – Web Development

Nexus AWS Club

Bengaluru, India

2025 – Present

- Assisted in organizing club hackathons, coordinating event logistics, and reviewing participant project submissions for technical soundness.
- Contributed to the web development team by maintaining the club's website and building new pages for event registration workflows.
- Provided technical support and mentorship to junior members during workshops, helping them debug and troubleshoot web development and cloud-related issues.

PROJECTS

Distributed Message Broker (Kafka Clone) | Java, TCP Sockets, Multi-Threading, System Design

[GitHub](#)

- Engineered a lightweight, event-driven message queue broker in pure Java using raw TCP ServerSockets and a custom binary wire framing protocol, eliminating external web framework overhead.
- Designed an Append-Only Commit Log storage engine that writes binary-encoded message frames directly to disk, achieving $O(1)$ sequential write performance for high-throughput workloads.
- Built thread-safe Producer and Consumer client APIs implementing round-robin partition routing, payload serialization, and offset-based log traversal, applying core distributed-systems and concurrency design patterns.

Moody-Foody – AI Ordering Chatbot | Python, FastAPI, Dialogflow, LLM, MySQL

[GitHub](#)

- Architected an LLM-driven conversational assistant using Google Dialogflow to automate end-to-end food ordering workflows.
- Built high-throughput, asynchronous REST APIs using FastAPI, following API versioning and error-handling best practices for real-time order routing to backend MySQL databases.
- Optimized relational data models and query performance for fast retrieval of user order histories while maintaining data integrity.

PlantIQ – Coffee Agronomy Advisory Platform | PyTorch, FastAPI, RAG, LLMs, Capacitor

[GitHub](#)

- Architected an end-to-end multimodal coffee agronomy platform for smallholder growers in Karnataka's Western Ghats, fine-tuning a ResNet-50 CNN with weighted cross-entropy and cosine annealing to achieve 96.4% Top-1 accuracy across 5 foliar disease classes at ~65ms CPU inference.
- Engineered a 3-stage Hybrid RAG pipeline combining BGE-Base dense embeddings, BM25Okapi sparse retrieval, and Cross-Encoder reranking with sigmoid calibration to eliminate chemical-dosage hallucinations in agronomic advisory responses.
- Built a sub-ms vernacular pre-router for Kannada/Kanglish queries powering a Gemini 2.5 Flash chatbot with Groq GPT-OSS 120B failover, and shipped a lightweight Capacitor 7 Android client with a Haversine-based P2P marketplace.

ACHIEVEMENTS & EXTRACURRICULARS

- **Academic Excellence:** Ranked among the top 1,700 students state-wide in the Gujarat Higher Secondary Certificate (HSC) Examinations.
- **Treasure Hunt Competition:** Secured 2nd place in a team-based treasure hunt, with teammates solving DSA problems to unlock clues that guided the rest of the team to each checkpoint.
